GacoFlex™ acrylic latex coatings provide a waterproof, weather resistant, color stable membrane for the rehabilitation of metal roofs of all types and shapes. GacoFlex™ A-38 series coatings are your best choice for a tough, glossy coating which simulates the finish of a new metal roof.

GacoFlex™ A-3200 White will reflect the sun's ultraviolet rays. This ultraviolet radiation is normally absorbed and turned to heat. The reflectivity of GacoFlex™ A-3200 will help to keep roof temperatures cooler and thus lessen the demands on air conditioning equipment.

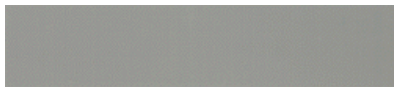

Suitable surfaces to receive GacoFlex™ acrylic systems include, steel, galvanized steel, aluminum, copper and prefinished metal (other than siliconized finishes).

A-3840 Classic White

A-3843 Evergreen

A-3841 Old Town Gray

A-3844 Colonial Red

A-3842 Weathered Copper

A-3845 Tahoe Blue

A-38 series coatings also come in the standard colors of A-3801 Oyster, A-3802 Pewter, A-3816 Shale, and A-3818 Adobe.

Actual colors may vary slightly due to computer monitor settings, and printer settings. When product is applied, color may also be affected by application technique, surface texture, and lighting conditions.
