| Location | Duvall, Washington | Area Manager | Dennis Hatfield |
| Type of Project | Troweled Urethane Pedestrian Deck | Problem to be Solved | Waterproof Three Decks |

GacoFlex Urethane Deck System Complements New Home Design

A spacious new home in Duvall, Washington was designed to allow the owners to enjoy a panoramic view of the Cascade mountain range. To take advantage of the view, the home included floor to ceiling windows and three outdoor decks.

Pahlka Waterproofing Inc., of Seattle, was selected during the summer of 1999 to install and waterproof all of the decks.

“Gaco and Pahlka Waterproofing did a very fine job. We will certainly recommend you both.”
—Homeowner

First, metal flashing was put into place. A urethane base coat of GacoFlex UB-6407 was applied by roller to the plywood surface.

After the base coat was allowed to cure for at least 8 hours, the urethane finish coat was applied by trowel over the surface.

The troweled mixture consisted of GacoFlex urethane U-66 and GacoShell ground walnut shell to add texture. When applied according to specification, GW-13-U troweled pedestrian deck exceeds the American Disability Act recommended static coefficient of friction.

These steps were repeated for all three decks, a total of 2000 square feet.

The pleased homeowner commented, “Gaco and Pahlka Waterproofing did a very fine job. We will certainly recommend you.”
